

September 30, 1993

Mr. John Roberts
FairTec Enterprises, Inc.

Dear John:

As you know, I recently purchased a gallon of Militec-1 from your firm and experienced very satisfying results that I would like to tell you about.

With the quantity I purchased, I was able to treat my 1984 33' Trojan power boat, its transmission, drive system and generator, my 1990 Volvo 780 Bertone and my wife's 1987 Volvo GLE wagon.

The most noticeable differences are that the boat now runs much quieter and has experienced an increase of a minimum of 150 peak RPM. This improvement means an increase in fuel economy. In addition, the 1987 Volvo's automatic transmission shifting has improved, becoming more positive and smoother.

I now use Militec-1 in every metal to metal friction reducing application I have and have recommended it to a number of marinas that I do business with and they now sell it to their customers.

Thank you for introducing me to Militec-1. I won't run an engine without it!

Very truly yours,

Michael J. Henry,
Senior Vice President
